

PROJECTS WORTH KNOWING

The AIA COTE Top Ten Green Projects for 2016, includes the Phipps Conservatory and Botanical Gardens, Center for Sustainable Landscapes (CSL). This facility that houses groundbreaking sustainability research and science education programs serves as a key part of the public garden's immersive visitor experience. 7group facilitated a dozen integrative design charrettes to develop the site and building design, prepared energy and daylighting models to assess different options for all major building assemblies, completed the measurement and verification study to confirm the energy savings predicted, and helped the team to make informed material choices. By embodying the principles of regenerative living systems the CSL demonstrates the benefits of humanity living in harmony with nature.
